

Piyush Kumar

Data Scientist

✉ pr14122001@gmail.com ☎ 8527891728  LinkedIn  Github  Portfolio

PROFILE

Data Scientist with hands-on experience in building and deploying data-driven solutions across fraud detection, recommendation systems, and sustainability analytics. Strong foundation in Python, Machine Learning, and data preprocessing, with a focus on translating business problems into explainable models and decision-ready insights. Comfortable working in cross-functional teams and delivering measurable impact through analytics and AI.

EDUCATION

Bachelor of Technology

Lovely Professional University

07/2020 – 06/2024

PROFESSIONAL EXPERIENCE

Prompt Engineer (Freelance)

SOUL AI

09/2024 – 11/2024

- Designed and optimized LLM-based prompts for e-commerce anomaly detection, reducing false positives by **20%** and improving overall fraud detection accuracy.
- Delivered interpretable outputs to support business decision-making rather than black-box predictions..

Genesis Trainee

KPIT Technologies

12/2023 – 04/2024

Pune, India

- Contributed to Agile development of production-grade software modules using Modern C++, focusing on maintainability and performance.
- Refactored legacy components using OOP principles, reducing code complexity by **15%** and improving system efficiency.

PROJECTS

Resume Ranking System with AI

Python, NLP

- Built an end-to-end resume ranking system to help recruiters identify the most relevant candidates for a given job description, reducing manual screening effort and improving consistency.
- Designed a multi-signal ranking engine combining **TF-IDF keyword similarity**, **BERT-based semantic similarity**, and a **machine learning ranking score**, aggregated using configurable weighted scoring.
- Added health checks, fallback ranking logic, and diagnostic endpoints to ensure system robustness and reliability.

ML Interpreter: Codeless Data Analysis Platform

Python, Streamlit

- Built a no-code EDA platform automating data visualization and feature explanation, reducing manual analysis time by **40%**.
- Integrated SHAP/LIME for model interpretability, improving cross-team decision-making.
- Enabled faster, data-backed decision-making by improving transparency and trust in ML models.

Personalized Music Recommendation

Python

- Developed a content-based recommendation system using Spotify API and cosine similarity on audio features.
- Improved song recommendation relevance by **35%** through feature selection and similarity optimization.
- Designed the system to adapt to evolving user preferences and behavior patterns..

SKILLS

Programming Language

Programming & Tools: Python (Pandas, NumPy, Scikit-learn, Flask, Streamlit), SQL, Java, C++ (17, 20), Git, REST APIs, MS Excel, PowerPoint

Analytics & Machine Learning

Regression, Classification, Time Series Forecasting (ARIMA), Neural Networks, Model Explainability (SHAP, LIME)

Deep Learning & AI

Introductory Deep Learning, Generative AI (LLM Prompt Engineering)

Data Visualization

Exploratory Data Analysis (EDA), Feature Engineering, Tableau, Matplotlib, Seaborn, Power BI, Analytical Reporting
